

Radio Auxiliary Unit

Product Code: B8910
Radio Auxiliary Unit

Product Description

The Radio Auxiliary unit is for use with Bitea B8808 Audio Recorders and B8910/11 Audio Streamers and similar equipment.

It provides specific radio talk group audio which can be connected to recorders and streamers.

It is a 2U 19" lockable rack unit containing two hand held car kits and radio cradles with mains power supply and antenna connections.

The audio comes out via a RJ45 connector on the rear panel and the audio level is controlled by the radio volume controls.

Application and Benefits

- The unit provides discrete Talk Group audio for Bitea Audio Recorders and Audio Streamers
- Each 2U 19" rack unit has a lockable drawer containing the radios, mains power supply and rear mounted connections for mains, antennas and RJ45 audio output.
- The required talk groups are selected in the normal way on the radios held inside in their car kit cradles.
- The radios and talk groups can be changed as required by the users.
